Foreword

The Victorian Government is committed to implementing all recommendations outlined in the Royal Commission's Final report into the Mental Health System.

It is important to understand the current context for Victorians and the impacts on their mental health to inform how we can respond and support all Victorians experiencing mental illness or psychological distress, including their carers, families and supporters and members of the workforce.

The following report presents information about a range of different services. We acknowledge that some consumers, carers and community members may find this data distressing. You may want to consider how and when you read this report.

If you find content in this report distressing, or if you or a loved one need support, the following support services are available:

- If you are not in immediate danger but you need help, call **NURSE-ON-CALL** on **1300 60 60 24**.
- For crisis support, contact **Lifeline** on **13 11 14**.
- For phone-based support contact **Beyond Blue** on **1300 224 636**.
- If you are looking for a mental health service, visit **betterhealth.vic.gov.au**.
- **For situations that are harmful or life-threatening, contact emergency services immediately on Triple Zero (000).**

About the report

This report has been prepared by the Victorian Agency for Health Information (VAHI) to provide the Victorian community with regular information on system activity regarding publicly-funded mental health (MH) and alcohol and other drug (AoD) treatment services in Victoria.

The data in this report contains information about emergency department (ED), ambulance, triage, community-based and bed-based mental health services, as well as Victoria's publicly-funded AoD treatment services. The report details service activity across adult, older persons, child youth and adolescent (CAMHS/CYMHS) populations. It provides moving averages of activity measures over the most recent four week period, with comparisons against the same period for 2019–2021 to highlight changes over time.

The transparency of health service activity data to members of the Victorian community delivers on the commitment of the Victorian Government to providing publicly available information.

Data presented in this report complements other publicly available data on the performance of Victorian mental health services available via the Department of Health website - [Mental health performance reports](#).

For further information, or to provide feedback on this report, please email vahi@vahi.vic.gov.au.

About the data

This report includes the latest available 4-week moving averages, as well as comparisons with the same period in 2019 (SP2019), 2020 (SP2020) and 2021 (SP2021), where available. Recent data is interim and may be subject to change as services correct and update their submissions.

Data used to calculate the measures in this report were sourced from the following collections.

- Ambulance Victoria data
- Client Management Interface / Operational Data Store (CMI/ODS)*
- Mental Health Triage Minimum Dataset
- Victorian Alcohol and Drug Collection (VADC)
- Victorian Emergency Minimum Dataset (VEMD)

Data extracted from the VEMD and presented in this report exclude type of visit code '19' (COVID-19 assessment clinic), and triage category '6' (dead on arrival).

For technical specifications of measures presented in this report, please email vahi@vahi.vic.gov.au.

About VAHI

VAHI is a division of the Department of Health, dedicated to delivering trusted information to inform better decisions that improve the health and wellbeing of Victorians. VAHI contributes to the Department's ambitious system reform agenda in many ways:

- Analysing and sharing information across the Victorian health system to ensure services have an accurate picture of their quality and safety.
- Monitoring and reporting on public and private services that impact on health, wellbeing, quality and safety to stimulate and inform improvements, increase transparency and accountability, and inform the community.
- Collecting and analysing information about the health status of Victorians to inform policy development and planning, and to give a complete picture of health in Victoria.

For more information about VAHI, visit vahi.vic.gov.au.

Emergency department presentations

Number of mental health-related ED presentations

Measure presents the moving average number of emergency department presentations per week. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 1,726
(Sun 29 May 2022)

SP2019: 1,841	Change: -115
SP2020: 1,917	Change: -191
SP2021: 2,008	Change: -282

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of mental health-related ED presentations, Aboriginal and Torres Strait Islander people

Measure presents the moving average number of mental health-related ED presentations per week where the patient identified as Aboriginal and/or Torres Strait Islander. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 89.0
(Sun 29 May 2022)

SP2019: 79.3	Change: 9.7
SP2020: 91.0	Change: -2.0
SP2021: 95.5	Change: -6.5

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Percentage of mental health-related ED presentations where the patient re-presented to the same campus within 48 hours

Measure presents the moving average percentage of mental health-related emergency department presentations per week where the patient re-presented to the same campus within 48 hours.

Emergency department presentations

Number of mental health-related ED presentations, ages 0-17 years

Measure presents the moving average number of mental health-related ED presentations per week where the patient was aged under 18 years. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 268
(Sun 29 May 2022)

SP2019: 250 Change: 18
SP2020: 231 Change: 37
SP2021: 344 Change: -76
Data source: VEMD. Date extracted: 27 Jun 2022.

Number of mental health-related ED presentations, ages 18-25 years

Measure presents the moving average number of mental health-related ED presentations per week where the patient was aged 18 – 25 years. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 334
(Sun 29 May 2022)

SP2019: 379 Change: -45
SP2020: 403 Change: -69
SP2021: 390 Change: -56
Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of mental health-related ED presentations, ages 65+ years

Measure presents the moving average number of mental health-related ED presentations per week where the patient was aged 65 years and over. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 187
(Sun 29 May 2022)

SP2019: 167
SP2020: 182
SP2021: 189
Data source: VEMD. Date extracted: 27 Jun 2022.

Number of eating disorder-related ED presentations, all ages

Measure presents the moving average number of eating disorder-related ED presentations per week. An eating disorder-related ED presentation includes those with a primary or other diagnosis of ICD-10AM F500-F509. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 26.5
(Sun 29 May 2022)

SP2019: 18.5
SP2020: 21.8
SP2021: 23.3
Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of anxiety disorder-related ED presentations, all ages

Measure presents the moving average number of anxiety disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F418, F419, F445 or F449. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 157
(Sun 29 May 2022)

SP2019: 210	Change: -53
SP2020: 238	Change: -81
SP2021: 214	Change: -57

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of mood disorder-related ED presentations, all ages

Measure presents the moving average number of mood disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F30-F39. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 146
(Sun 29 May 2022)

SP2019: 221	Change: -75
SP2020: 190	Change: -44
SP2021: 163	Change: -17

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of stress and adjustment disorder-related ED presentations, all ages

Measure presents the moving average number of stress and adjustment disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F431-F439. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 29.3
(Sun 29 May 2022)

SP2019: 40.5
SP2020: 33.3
SP2021: 34.5
Data source: VEMD. Date extracted: 27 Jun 2022.

Number of schizophrenia, paranoia and acute psychotic disorder-related ED presentations, all ages

Measure presents the moving average number of schizophrenia, paranoia and acute psychotic disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F20-F29. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 197
(Sun 29 May 2022)

SP2019: 178
SP2020: 205
SP2021: 185
Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Average length of stay (hours) of mental health-related ED presentations

Measure presents the moving average length of stay (in hours) per week for mental health-related ED presentations. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 8.2
(Sun 29 May 2022)

SP2019: 6.2 Change: 2.0

SP2020: 5.4 Change: 2.8

SP2021: 6.9 Change: 1.3

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of mental health-related ED presentations exceeding a 24-hour length of stay

Measure presents the moving average number of mental health-related ED presentations per week with a length of stay exceeding 24 hours. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 36.0
(Sun 29 May 2022)

SP2019: 9.3 Change: 26.7

SP2020: 5.8 Change: 30.2

SP2021: 15.0 Change: 21.0

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of intentional self-harm and suicidal ideation ED presentations, all ages

Measure presents the moving average number of emergency department presentations per week with recorded intentional self-harm and/or suicidal ideation. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 488
(Sun 29 May 2022)

SP2019: 467	Change: 21
SP2020: 461	Change: 27
SP2021: 599	Change: -111

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of intentional self-harm and suicidal ideation ED presentations, by triage category

Measure presents the moving average number of intentional self-harm and suicidal ideation ED presentations per week over the previous 12 months by triage categories: 1. Resuscitation, 2. Emergency, 3. Urgent, 4. Semi-urgent, 5. Non-urgent. Reported by departure date.

● 1 ● 2 ● 3 ● 4 ● 5

Latest 4-week average (per week): 488
(Sun 29 May 2022)

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of intentional self-harm and suicidal ideation ED presentations, triage categories '1' and '2'

Measure presents the moving average number of intentional self-harm and suicidal ideation ED presentations per week by triage categories: 1. Resuscitation, 2. Emergency. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 169
(Sun 29 May 2022)

SP2019: 114 Change: 55

SP2020: 122 Change: 47

SP2021: 184 Change: -15

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of intentional self-harm and suicidal ideation ED presentations, ages 0-17 years

Measure presents the moving average number of emergency department presentations per week with recorded intentional self-harm and/or suicidal ideation where the patient was aged under 18 years. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 128.8
(Sun 29 May 2022)

SP2019: 96.8 Change: 32.0

SP2020: 88.5 Change: 40.3

SP2021: 156.5 Change: -27.7

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of intentional self-harm and suicidal ideation ED presentations, ages 0-17 years, by triage category

Measure presents the moving average number of intentional self-harm and suicidal ideation ED presentations per week over the previous 12 months where the patient was aged under 18 years, by triage categories: 1. Resuscitation, 2. Emergency, 3. Urgent, 4. Semi-urgent, 5. Non-urgent. Reported by departure date.

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of intentional self-harm and suicidal ideation ED presentations, ages 0-17 years, triage categories '1' and '2'

Measure presents the moving average number of intentional self-harm and suicidal ideation ED presentations per week where the patient was aged under 18 years, by triage categories: 1. Resuscitation, 2. Emergency. Reported by departure date.

Emergency department presentations

Number of intentional self-harm and suicidal ideation ED presentations, ages 18-25 years

Measure presents the moving average number of intentional self-harm and suicidal ideation ED presentations per week where the patient was aged 18 – 25 years. Reported by departure date.

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of alcohol and other drug-related ED presentations

Measure presents the moving average number of ED presentations per week with an acute AoD-related primary or other diagnosis, or where the patient was referred to an AoD service on departure (including counselling, residential withdrawal, rehabilitation and supported accommodation). Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Number of alcohol and other drug-related ED presentations, by triage category

Measure presents the moving average number of acute AoD-related ED presentations per week over the previous 12 months by triage categories: 1. Resuscitation, 2. Emergency, 3. Urgent, 4. Semi-urgent, 5. Non-urgent. Reported by departure date.

● 1 ● 2 ● 3 ● 4 ● 5

Emergency department presentations

Number of alcohol and other drug-related ED presentations, triage categories '1' and '2'

Measure presents the moving average number of acute AoD-related ED presentations per week by triage categories:

1. Resuscitation, 2. Emergency. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Number of alcohol-related ED presentations

Measure presents the moving average number of ED presentations per week with a primary or other diagnosis reflecting an acute condition or manifestation of alcohol use or dependence. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Emergency department presentations

Number of alcohol-related ED presentations, by triage category

Measure presents the moving average number of ED presentations per week over the previous 12 months with an acute condition or manifestation of alcohol use or dependence, by triage categories: 1. Resuscitation, 2. Emergency, 3. Urgent, 4. Semi-urgent, 5. Non-urgent. Reported by departure date.

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of alcohol-related ED presentations, triage categories '1' and '2'

Measure presents the moving average number of ED presentations per week with an acute condition or manifestation of alcohol use or dependence, by triage categories: 1. Resuscitation, 2. Emergency. Reported by departure date.

Data source: VEMD. Date extracted: 27 Jun 2022.

Emergency department presentations

Number of drugs of dependence and illicit drug-related ED presentations

Measure presents the moving average number of ED presentations per week with a primary or other diagnosis reflecting an acute condition or manifestation of use or dependence of an illicit substance, or drugs with a recognised potential for misuse, abuse and dependence. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Latest 4-week average (per week): 207
(Sun 29 May 2022)

SP2019: 238	Change: -31
SP2020: 283	Change: -76
SP2021: 227	Change: -20

Data source: VEMD. Date extracted: 27 Jun 2022.

Number of drugs of dependence and illicit drug-related ED presentations, by triage category

Measure presents the moving average number of ED presentations per week over the previous 12 months with a primary or other diagnosis reflecting an acute condition or manifestation of use or dependence of an illicit substance, or drugs with a recognised potential for misuse, abuse and dependence. Reported by triage categories: 1. Resuscitation, 2. Emergency, 3. Urgent, 4. Semi-urgent, 5. Non-urgent. Reported by departure date.

● 1 ● 2 ● 3 ● 4 ● 5

Number of drugs of dependence and illicit drug-related ED presentations, triage categories '1' and '2'

Measure presents the moving average number of ED presentations per week with a primary or other diagnosis reflecting an acute condition or manifestation of use or dependence of an illicit substance, or drugs with a recognised potential for misuse, abuse and dependence by triage categories: 1. Resuscitation, 2. Emergency. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Ambulance Victoria

Number of mental health-related ambulance cases

Measure presents the moving average number of ambulance cases per week where the clinical information captured within the patient care record indicated the case was mental health related. ‘Ambulance cases’ refer to emergency and non-emergency occasions where Ambulance Victoria has attended to a patient at a scene and filled out a patient care record.

Number of ambulance patients transported to ED which were MH-related

Measure presents the moving average number of ambulance patients per week transported to a hospital ED where the clinical information captured within the patient care record indicated the case was mental health related. A hospital ED is defined as one of the 40 healthcare providers with the greatest number of ambulance arrivals in Victoria.

Ambulance Victoria

Percentage of ambulance patients transported to ED which were MH-related

Measure presents the moving average percentage of total ambulance patients per week transported to a hospital ED for mental health related reasons. A hospital ED is defined as one of the 40 healthcare providers with the greatest number of ambulance arrivals in Victoria.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

(Sun 29 May 2022)

SP2019: 4.1 Change: -1.0
SP2020: 4.3 Change: -1.2
SP2021: 3.4 Change: -0.3
Data source: AV. Date extracted: 28 Jun 2022.

Mental health triage services

Number of mental health triage episodes

Measure presents the moving average number of mental health triage contacts per week resulting in a triage scale being assigned. Refer to *Triage scale – mental health service guidelines* for detailed information on the mental health triage process and triage codes.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Percentage of mental health triage episodes where the service recipient is a parent, family, carer or other

Measure presents the percentage of mental health triage contacts per week where the service recipient is a parent, family member, carer or other recipient. Refer to *Triage scale – mental health service guidelines* for detailed information on the mental health triage process and triage codes.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Mental health triage services

Number of mental health triage episodes (CAMHS/CYMHS)

Measure presents the moving average number of mental health triage contacts per week resulting in a triage scale being assigned with an assigned child and youth (CAMHS/CYMHS) program type at intake. Refer to *Triage scale – mental health service guidelines* for detailed information on the mental health triage process and triage codes.

Clinical mental health care

Number of ambulatory service contact hours – PEHP*

Measure reports the moving average number of ambulatory service contact hours per week from a funded perinatal emotional health program. Includes the following contact types: A: Registered consumer contact, B: Un-registered consumer contact, C: Community contact, E: Case contact. Service hours are adjusted for group session contacts.

Alcohol and other drug treatment services

Number of new clients accessing alcohol and other drug treatment services*

Measure presents the moving average number of active clients per week accessing AoD treatment services who had not accessed AoD treatment services within the last five years. This measure is sourced from the Victorian Alcohol and Drug Collection (VADC) which was established during 2018-19. Data quality and completeness issues have been observed during its establishment. Interpret with caution.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Number of commenced intake and comprehensive assessment events*

Measure presents the moving average number of commenced intake and comprehensive assessment events per week. Intake and assessment events are used to determine whether a client seeking help for drug use requires treatment and which treatment type they should receive. This measure is sourced from the Victorian Alcohol and Drug Collection (VADC) which was established during 2018-19. Data quality and completeness issues have been observed during its establishment. Interpret with caution.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022

Alcohol and other drug treatment services

Number of commenced AoD community counselling events*

Measure presents the moving average number of commenced counselling events per week. Counselling is the primary community-based AoD treatment option. This measure is sourced from the Victorian Alcohol and Drug Collection (VADC) which was established during 2018-19. Data quality and completeness issues have been observed during its establishment. Interpret with caution.

SP2020: 24.1 Change: 1.5

SP2021: 25.9 Change: -0.3

Data source: VADC. Date extracted: 27 Jun 2022.

Notes and annotations

* Data between November 2020 and November 2021 may have been affected by protected industrial activity, impacting the collection of non-clinical and administrative data and recording of ambulatory mental health service activity and consumer outcome measures. Affected data reported during this period should be interpreted with caution.

† An ambulatory contact is flagged as being eating disorder-related where either:

1. an eating disorder diagnosis is entered in the community at the treating campus and a contact is reported by that same campus in the period from the date of diagnosis to:
 - a. one year post diagnosis date, or
 - b. the date at which a new diagnosis is entered in the community by the campus that is not eating disorder-related (whichever occurs first); or
2. the contact is reported against an eating disorder-specific program type.
