Victorian Agency for **Health Information**

Mental health, alcohol and other drug treatment services in Victoria

April 2023

VICTORIA State Government

Foreword

The Victorian Government is committed to implementing all recommendations outlined in the Royal Commission's Final report into the Mental Health System.

It is important to understand the current context for Victorians and the impacts on their mental health to inform how we can respond and support all Victorians experiencing mental illness or psychological distress, including their carers, families and supporters and members of the workforce.

The following report presents information about a range of different services. We acknowledge that some consumers, carers and community members may find this data distressing. You may want to consider how and when you read this report.

If you find content in this report distressing, or if you or a loved one need support, the following support services are available:

- If you are not in immediate danger but you need help, call **NURSE-ON-CALL** on **1300 60 60 24**.

- For crisis support, contact **Lifeline** on **13 11 14**.

- For phone-based support contact **Beyond Blue** on **1300 224 636**.

- If you are looking for a mental health service, visit **betterhealth.vic.gov.au**.

- **For situations that are harmful or life-threatening, contact emergency services immediately on Triple Zero (000)**.

About the report

This report has been prepared by the Victorian Agency for Health Information (VAHI) to provide the Victorian community with regular information on system activity regarding publicly-funded mental health (MH) and alcohol and other drug (AoD) treatment services in Victoria.

The data in this report contains information about emergency department (ED), ambulance, triage, community-based and bed-based mental health services, as well as Victoria's publicly-funded AoD treatment services. The report details service activity across adult, older persons, child youth and adolescent (CAMHS/CYMHS) populations. It provides moving averages of activity measures over the most recent four week period, with comparisons against the same period over the preceding four years to highlight changes over time.

The transparency of health service activity data to members of the Victorian community delivers on the commitment of the Victorian Government to providing publicly available information.

Data presented in this report complements other publicly available data on the performance of Victorian mental health services available via the Department of Health website - Mental health performance reports.

For further information, or to provide feedback on this report, please email vahi@vahi.vic.gov.au.

About the data

This report includes the latest available 4-week moving averages, as well as comparisons with the same period in 2019 (SP2019), 2020 (SP2020), 2021 (SP2021) and 2022 (SP2022), where available. Recent data is interim and may be subject to change as services correct and update their submissions.

Data used to calculate the measures in this report were sourced from the following collections.

- Ambulance Victoria data
- Client Management Interface / Operational Data Store (CMI/ODS)*
- Mental Health Triage Minimum Dataset
- Victorian Alcohol and Drug Collection (VADC)
- Victorian Emergency Minimum Dataset (VEMD)

Data extracted from the VEMD and presented in this report exclude type of visit code '19' (COVID-19 assessment clinic), triage category '6' (dead on arrival) and virtual presentations.

For technical specifications of measures presented in this report, please email vahi@vahi.vic.gov.au.

About VAHI

VAHI is a division of the Department of Health, dedicated to delivering trusted information to inform better decisions that improve the health and wellbeing of Victorians. VAHI contributes to the Department's ambitious system reform agenda in many ways:

- Analysing and sharing information across the Victorian health system to ensure sservices have an accurate picture of their quality and safety.

- Monitoring and reporting on public and private services that impact on health, wellbeing, quality and safety to stimulate and inform improvements, increase transparency and accountability, and inform the community.

- Collecting and analysing information about the health status of Victorians to inform policy development and planning, and to give a complete picture of health in Victoria.

For more information about VAHI, visit vahi.vic.gov.au.

Interpreting charts in this report

1

Number of mental health-related ED presentations

Measure presents the moving average number of emergency department presentations per week. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

3 Latest 4-week average (per week): 1,943
(Sun 26 Mar 2023)

4
SP2019: 2,010
SP2020: 1,891
SP2021: 2,058
SP2022: 2,009

5
Change: -67
Change: 52
Change: -115
Change: -66

2 Data source: VEMD. Date extracted: 25 Apr 2023.

1 Measure name, description, inclusions and exclusions.

2 Data source collection and date extracted from the source collection. Health services may update data regularly. For this reason, there may be differences in reported data between previous and future reports as data are not static.

3 Latest 4-week average as at the date specified.

4 Average over the same 4-week period in 2019 (SP2019), 2020 (SP2020), 2021 (SP2021) and 2022 (SP2022).

5 Change in reported/observed numbers between the latest 4-week average and the same 4-week periods in 2019, 2020, 2021 and 2022.
6 Data presented in each chart are expressed as a '4-week moving average'. These are based on the calculated average of each week's reported/observed numbers across a 4-week period. Presenting data as a moving average can smooth out short-term fluctuations in order to more clearly present longer-term patterns.

Emergency department presentations

Number of mental health-related ED presentations

Measure presents the moving average number of emergency department presentations per week. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

SP2022: 191	Change: 17

Data source: VEMD. Date extracted: 25 Apr 2023.

Number of eating disorder-related ED presentations, all ages

Measure presents the moving average number of eating disorder-related ED presentations per week. An eating disorder-related ED presentation includes those with a primary or other diagnosis of ICD-10AM F500-F509. Reported by departure date.

4-week moving average ●2019 ●2020 ●2021 ●2022 ●2023

Latest 4-week average (per week): 23.3
(Sun 26 Mar 2023)

SP2019: 16.8	Change: 6.5
SP2020: 16.0	Change: 7.3
SP2021: 24.8	Change: -1.5
SP2022: 23.3	Change: 0.0

Data source: VEMD. Date extracted: 25 Apr 2023.
Emergency department presentations

Number of anxiety disorder-related ED presentations, all ages

Measure presents the moving average number of anxiety disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F418, F419, F445 or F449. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 182
(Sun 26 Mar 2023)

SP2019: 231	Change: -49
SP2020: 234	Change: -52
SP2021: 220	Change: -38
SP2022: 216	Change: -34

Data source: VEMD. Date extracted: 25 Apr 2023.

## Number of mood disorder-related ED presentations, all ages

Measure presents the moving average number of mood disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F30-F39. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 146
(Sun 26 Mar 2023)

SP2019: 245	Change: -99
SP2020: 175	Change: -29
SP2021: 173	Change: -27
SP2022: 159	Change: -13

Data source: VEMD. Date extracted: 25 Apr 2023.
Emergency department presentations

Number of stress and adjustment disorder-related ED presentations, all ages
Measure presents the moving average number of stress and adjustment disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F431-F439. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 27.8
(Sun 26 Mar 2023)

SP2019: 46.0	Change: -18.2
SP2020: 32.3	Change: -4.5
SP2021: 39.3	Change: -11.5
SP2022: 35.5	Change: -7.7

Data source: VEMD. Date extracted: 25 Apr 2023.

Number of schizophrenia, paranoia and acute psychotic disorder-related ED presentations, all ages

Measure presents the moving average number of schizophrenia, paranoia and acute psychotic disorder-related ED presentations per week. Measure includes those with a primary or other diagnosis of ICD-10AM F20-F29. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 195
(Sun 26 Mar 2023)

SP2019: 211	Change: -16
SP2020: 172	Change: 23
SP2021: 180	Change: 15
SP2022: 192	Change: 3

Data source: VEMD. Date extracted: 25 Apr 2023.
Emergency department presentations

Average length of stay (hours) of mental health-related ED presentations

Measure presents the moving average length of stay (in hours) per week for mental health-related ED presentations. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 7.9
(Sun 26 Mar 2023)

SP2019: 6.3		Change: 1.6
SP2020: 5.8		Change: 2.1
SP2021: 6.4		Change: 1.5
SP2022: 7.6		Change: 0.3

Data source: VEMD. Date extracted: 25 Apr 2023.

Number of mental health-related ED presentations exceeding a 24-hour length of stay

Measure presents the moving average number of mental health-related ED presentations per week with a length of stay exceeding 24 hours. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 47.8
(Sun 26 Mar 2023)

SP2019: 9.0		Change: 38.8
SP2020: 5.8		Change: 42.0
SP2021: 12.3		Change: 35.5
SP2022: 25.3		Change: 22.5

Data source: VEMD. Date extracted: 25 Apr 2023.

Emergency department presentations

## Number of intentional self-harm and suicidal ideation ED presentations, all ages
Measure presents the moving average number of emergency department presentations per week with recorded intentional self-harm and/or suicidal ideation. Reported by departure date.

4-week moving average ● 2019 ● 2020 ● 2021 ● 2022 ● 2023

Latest 4-week average (per week): 533
(Sun 26 Mar 2023)

SP2019: 514	Change: 19

Annotations

* Data between November 2020 and November 2021 may have been affected by protected industrial activity, impacting the collection of non-clinical and administrative data and recording of ambulatory mental health service activity and consumer outcome measures. Affected data reported during this period should be interpreted with caution.

† An ambulatory contact is flagged as being eating disorder-related where either:

1. an eating disorder diagnosis is entered in the community at the treating campus and a contact is reported by that same campus in the period from the date of diagnosis to:
   a. one year post diagnosis date, or
   b. the date at which a new diagnosis is entered in the community by the campus that is not eating disorder-related (whichever occurs first); or
2. the contact is reported against an eating disorder-specific program type.
