

# Health system performance: how does Victoria fare nationally and internationally?

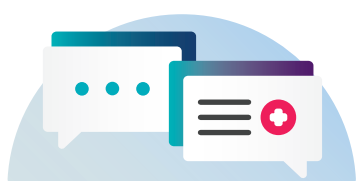

Three out of four adults (**72%**) report they have very good or excellent health and a high level of satisfaction with life.

**96%** of adults have a regular doctor or place of care and **82%** of adults rate the care they receive from their regular doctor as excellent or very good.

Nine out of 10 Victorian adults (**91%**) with a chronic disease are confident about managing their own health, and Victoria ranked highest of all comparators in terms of breast cancer survival (**90%**).

Victoria ranks highest for communication and engagement between patients and their GPs and other primary care medical staff and highest for patients receiving easy to understand medical information.
